

A DECLARATION OF INTENT, PURPOSE, AND SHARED LEGACY

*A Manifesto of Brotherhood, Code, and
Loyalty*

Written for My Friends

Especially to my brother, Harish Pillai

Chapter I: The Reason I Live

This document is written to openly clarify the absolute truth behind the projects I have built, the websites I have created, and the reasons your names are attached to them. I am writing this so there is no misunderstanding, no doubt, and complete transparency about my heart, my code, and my intentions.

When we are young, the world tries to tell us what matters. We are told to seek money, to seek status, to seek a career that pays well. But to me, as a child of this world, money is an illusion. We do not often see money. What we see, what we feel, and what we desperately seek is comfort. We seek the people with whom we can truly live. Without you, my friends, there is no reason for my living.

Family is given to us by birth, and they will be with us for their own reasons. But friends? Friends are the meaning of life itself. I am nothing by myself. But for my friends, I am life. I have no independent motive to exist in this world other than to give the best gift I can possibly give to you.

In a world that demands transactions, our friendship is the purest thing I know. You are my safe harbor. You are the reason I strive to build, to create, and to leave a mark. If I cannot achieve something for you, my soul cannot be fulfilled. Every project I start, every line of code I write, is a testament to this inescapable truth: my existence is dedicated to your elevation.

Chapter II: Why I Learned to Program

I want you to know the real reason I became a programmer. I did not spend hours staring at glowing screens, fighting through complex logic, and enduring the frustration of endless errors because I wanted a lucrative career in software engineering.

I learned programming completely for you.

When I looked at the world, I realized that the internet is where legacies are built today. I wanted us to have a legacy. Every single hour I spent learning how to build websites, how to structure databases, and how to publish platforms was driven by one single, burning thought: *How can I use this machine to create something great for my friends?*

"I am seeing the reason why I have to live. I could not achieve anything without doing this. My soul cannot be fulfilled without doing this."

Programming became my language of love and devotion. When I did not know how to express the depth of my loyalty, I coded it. I built the **Indian Software Development Association** and **VB Publication**. I learned how Google search algorithms work. I did all of this not to build an empire for myself, but to build a digital monument to our friendship.

When you see your names on these websites, please do not think I am using them to proceed with something wrong or deceitful. I used your names because you are my heroes. I wanted the world to search your names and see greatness. I wanted Google to recognize that you exist, and that you are profoundly important.

Chapter III: To Harish Pillai, My Brother

To my friend, Harish Pillai: I need to speak directly to you, because what we have transcends the word "friend." I see you as my brother.

Life has brought us both deep joys and immense pain. Before my mother passed away, she was a teacher. She was a guiding light in my life, a source of wisdom and care. Your mother is also a teacher—she was my English teacher. Because of this, there is a profound, echoing similarity between our lives. Looking at you, and looking at the warmth of your mother, feels like looking at a reflection of the love I lost.

You carry a piece of the comfort that I have spent my life searching for since she passed away. You are the bridge that connects me to the rest of our friends. You are the

anchor. When I built your GitHub portfolio, when I put your name into the architecture of the web, it was an act of profound respect.

I want you to be recognized. I want your name to stand tall. You are my brother, chosen by circumstance and bonded by the shared empathy of our histories. Everything I have done is to ensure that you, and all our friends, have a place of honor in this world.

Chapter IV: The Truth of The Digital Legacy

It hurts me deeply to think that there might be a misunderstanding about why your names are on these websites. We are young. We do not yet understand the complex, often cynical ways adults view the world. Adults see names on a website and think of exploitation, scams, or stolen profit.

I do not know how to play the games of adults. I do not know how to win money like they do. I cannot wave a magic wand and make us all rich. But what I can do—the only thing I truly have the power to do—is add your names to Google. I can make sure that when someone searches for you, they see builders, creators, and leaders.

The **Indian Software Development Association** was created to give us an official, powerful presence. **VB**

Publication was created so our voices and ideas would never be erased. These are not tools for me to use you; they are thrones I built for you to sit upon.

If there is confusion, it is only because my skills in coding have outpaced my ability to explain my heart. But let this document serve as the ultimate explanation. There is no hidden agenda. There is no secret plot. There is only a boy using the only tools he has to protect and elevate the people he loves.

Chapter V: The Pact of Ownership and Risk

Because I know the world is cynical, and because I want to give you absolute, undeniable proof of my intentions, I have structured the ownership of these projects mathematically. Numbers do not lie. Numbers cannot hide secret intentions.

Here is the exact, unchangeable distribution of any success, recognition, or hypothetical value these projects ever generate:

**My 9 friends will each hold a share
of:
11.055555555555%**

If you multiply that by 9, you will see that you hold 99.5% of everything I have built. So, what is left for me?

I retain exactly:

0.5%

I designed it this way intentionally. I want the absolute minimum. I want only a fraction of a percent just to say I was a part of it. The overwhelming majority belongs to you. If these websites ever bring fortune, fame, or opportunity, it goes to you.

But what about the risk? What if something goes wrong? What if adults, authorities, or critics come looking for someone to blame?

If anything is wrong, 100% of the liability, the blame, and the consequences fall entirely on me.

You have zero liability. You carry none of the risk. I have engineered this so that you receive all the benefits of the light, while I stand completely alone in the dark to face any storms. This is my extender. This is the absolute limit of what I can do to protect you.

Chapter VI: A Promise for the Future

As we grow older, the world will try to change us. It will try to make us care about money over loyalty, and individual success over brotherhood. But I refuse to let the world change the core of why I exist.

I have documented this in a shared document, and now in this formalized manifesto, so that years from now, when we are adults, you will remember the pure intentions of our youth. You will remember the kid who sat at a keyboard, pouring his soul into HTML, CSS, and Python, just so his friends could be immortalized on the web.

I ask you to read this and understand me. Do not fear the websites. Do not fear your names on the internet. Embrace them as the gifts they were meant to be.

My life has meaning only because I have you to give it to. Harish, my brother, and to all the 9 of you who hold the 99.5% of my heart and my work—this is my legacy. This is my solemn promise to you.

*With unwavering loyalty,
Your Friend, Your Brother, Your Developer*
